It is the most popular CAD software for architectural, mechanical, engineering, and interior design professionals. The latest release, AutoCAD 2016, includes a number of improvements that allow it to be faster and more responsive. AutoCAD 2016 features include the ability to turn off the right mouse button and drag lines and arcs using the left mouse button, view and set the grid size on the fly, draw multiple, linked lines, and create multisegmented solids. A new option enables users to change the type of tool in the "Draw" or "Modify" tool box when the brush tool is active. You can also set the range of the viewport to zero in the 3D model, and you can now see three

points in the 3D view, not just the one. AutoCAD is a graphical-based, full-featured 2D drafting and design application that focuses on speed and efficiency. It includes tools for creating topology, dimensioning, and textured drawings. Because it uses a 2D, vector-based graphics system, it can also be used for 2D drafting, 2D computer-aided design, drawing of technical drawings, and engineering design. AutoCAD [32|64bit]

AutoCAD is available as a 32-bit and a 64-bit software application (at least to date). While the 32-bit software is used by most users of AutoCAD, particularly when using a 32-bit operating system, the 64-bit software is used for larger datasets and for new features. As such, a 64-bit operating system (a.k.a. a "64-bit platform") is required for the 64-bit version of AutoCAD to be useful. I'm using echo.appspot.com to stream my mp3 files to client, but I want to play sound on server that will be streamed to client. Is it possible? I read something about using Android MediaPlayer for that, but it's not working and can't find any useful information about that.

Q: How to add ActiveMQ to existing Spring Boot application I have a Spring Boot application with several modules. I need to add ActiveMQ for sending emails, messages, etc. To start, I've created the ActiveMQ module by using maven. It contains a main class: @SpringBootApplication public class ActiveMQApplication { public static void main(String[] args) { SpringApplication.run(ActiveMQApplication.class, args); } } Then, I add dependency: org.springframework.cloud spring-cloud-

starter-activemq If I try to run my application, I got errors like: 2017-11-06 20:21:12.903 ERROR 19995 --- [nio-7993-exec-5] o.s.boot.SpringApplication
