So I will share my tips for 3D printing if you want to make a PCB. We are using OrCAD CAD/CAM software to design the board and have some informations below. A+ Hot Melt Inks Rugged hot melt inks Thin copper layer For example: 4-layer (two internal & two external) +-20mil No special grade Low grade or less conductive Thickness for the outer layer could be 0.8 mil PCB board detail Base material What you should know before you start Hot melt inks will be cured at 80-90 degree Celsius. Please use low power mode during printing. Hot melt inks will melt if you print too fast. Never mix colors or colors that are close to each other. Printing hot melt inks have a limitation of 20x20x15mm. In case of the design is too small, the PCB will be cracked on the edge. Hot melt inks will take a long time to dry.
