Nuzlocke is one of those words that has a very broad use, as it can describe a
situation where a player is allowed to make any moves they wish with no
restrictions, or it can be the name of a very specific type of event where the
sole requirement is to try as hard as they can to beat a very specific set of
enemies. While the term nuzlocke is most commonly associated with the
practices of speedrunning and overworld hacking, in a sense the term can be
applied to almost any style of regular, challenge, or event play. Games with
this condition can be hardly playable because of random events that may occur.
Most of such games are of the same genre or theme, and have an endless,
linear, or non-linear gameplay. For example, the NES game Super Mario Bros
3 can be easily played as a nuzlocke game. The player must try to beat the
"boss" of each level, which typically occurs at the end of the stage. With every
defeat of the boss, some random effect will occur (detonations, new enemies,
switches on the floor, etc.). The player then must continue playing the game
while avoiding these effects, or be defeated, and have to start the level all over
again. Of course, this happens at the end of each level and is often the main
enemy of the game. However, the game is normally playable until all levels
have been beaten by this method. Nintendo DS Pokèmon Card Set: Pokèmon
