Importing Files If you have a file you'd like to edit with Photoshop, it's first necessary to convert your image into a PSD format file, which is Adobe's native file format. In case you haven't heard about PSD's, this is a simple,.psd file extension that does not include any special file format specifications. With a.psd file, you can open the file without any special software programs. With some degree of technical expertise, you can also open and edit.psd files in Photoshop. But, most users will want to use an alternative file format. Often, designers need to open and save file formats in the basic TIFF file format. If you know what your file is called, just go to "File," then "Open," and select the file. If you wish to know the file's exact extension, you can also go to "File," then "Save As," and choose "Save for Web & Devices." The new Creative Cloud Photography Plan will include Adobe Lightroom for photography, too. TIFF files are useful because they are open, which means that any Photoshop file that has been opened in Illustrator or InDesign could be opened in Photoshop for editing. Illustrator and InDesign, however, have the ability to natively save files in Photoshop's native PSD format. So, if you decide that you want to manipulate the text of your art, or if you want to cut the text from one art piece and put it into another, then you may want to learn how to save Illustrator and InDesign files in the Photoshop PSD format. Importing and Opening Files There are a variety of tutorials available that teach you how to open an image in Photoshop. You can even find instructions for opening a Photoshop file in Illustrator. To open an image in Photoshop, go to "File," then "Open." From there, select the file that you want to open. As you open the file, Photoshop's interface will guide you through the steps to import and edit the file. With a.psd file, you can then open the file in Photoshop. You can also open the file directly in Photoshop. Editing Images Photoshop is well suited to editing raster images, which include bitmapped, scanned, and type elements that have discrete pixels. The Photoshop file format includes all the layers necessary to separate and use these discrete elements.

For most designers and developers, Photoshop is the goto tool for editing and manipulating graphics. However, people using Photoshop for a few hours a week and using Photoshop Elements for an hour or two a week aren't using Photoshop at its best. I talk to people all the time about switching Photoshop Elements, and there is one question that comes up time and time again: "What is Photoshop Elements?" So, let's answer this question with the following "Why do I need Photoshop Elements?" Check out all the reasons why you should learn to use Photoshop Elements and start editing your images with it! 1. Photoshop Elements is Fast When I hear Photoshop and Photoshop Elements, the first thing I think of is Photoshop. It is a juggernaut in the design and photo editing world. But it isn't always the tool you want to use for faster projects. While Photoshop is great for larger projects, when you're just doing simple edits in Photoshop Elements, it's much faster. When I have a lot of photos I need to quickly edit, I usually use Photoshop Elements. The user interface is easy to understand, and you don't have to learn a complex program. 2. Photoshop Elements is Easy to Use The real trick to using Photoshop Elements is to use a basic workflow. Photoshop Elements works well for editing basic color correcting tasks. However, Photoshop Elements is still an advanced program and it can be very confusing for some people if they come from a Photoshop background. When you're using Photoshop Elements, you want to use a workflow that's simple, easy to understand and easy to use. You want to do as few clicks as possible to accomplish tasks. When you import a photo into Photoshop Elements, it offers you a few very simple options to adjust your photo. Brightness: Drag the slider right or left to increase or decrease the brightness of your image. You can also

select each channel individually to get better results, but we'll just handle the brightness adjustment in this post. Contrast: Drag the slider right or left to increase or decrease the contrast of your image. Gamma: Drag the slider right or left to increase or decrease the color saturation of your image. Saturation: Drag the slider right or left to increase or decrease the color saturation of your image. Invert: Click on the 05a79cecff

Q: How to generate empty enum I am working with an enum that represents some state of the application. The code is: public enum StateType { CONNECTION_ERROR(new HelpConnectException("Connection error")), CONNECTION_OK(null), INTERVAL_ERROR(new HelpIntervalException("Invalid interval")), INTERVAL_OK(null); private StateType() { } private final String message; private StateType(final String msg) { this.message = msg; } public String getMessage() { return message; } } When connecting to the server, this class is invoked by the server and the correct values should be selected. Sometimes the connection fails because of an exception. This case should be indicated by Connection Error StateType. However, when the exception is thrown, I have to use getConnectionError to get the corresponding state. This is a problem, because the code is: switch (stateType.getConnectionError()) { case CONNECTION_ERROR: this.connectionError = true; break; default: this.connectionError = false; } I don't want to add a case to each enum, for the same reason that the enum list "StateType" has a getConnectionError method. I would like to create a StateTypeBuilder, that works by itself and doesn't involve any switching case. The goal would be: StateType type = StateTypeBuilder.fromFailedConnection() //returns CONNECTION_ERROR How can this be done? A: Maybe you could do something like this? enum StateType { CONNECTION_ERROR(new HelpConnectException("Connection error")), CONNECTION_OK(null), INTERVAL_ERROR(new HelpIntervalException("Invalid interval")), INTERVAL_OK(null); private StateType() { }

2011 Year in Review In just over three weeks, we'll close out 2011 in a major way. The public is just discovering the fruit of our labors in an untypically loose and recent budget agreement and cooler weather. So this article will be short and sweet. TECH SUPPORT. A big move was made in the IT realm to a s/w support organization, Alcatel-Lucent. We were able to select a technology vendor that will expand our ability to improve service for our SMB and mid-market clients. The service offerings and support will continue to improve. The vendor is a family business with experience in the U.S. But it is structured as a foreign-owned company for tax reasons. SLOW TO CLEAN IT. The expansion of the workforce was always the first priority, and it has not come to fruition. One reason is that we are continuing to work to cut both operational and administrative costs. Adding 75 new employees – and the required training – is one opportunity that has been sacrificed. CENTER-OF-CONTROL REMAINDER OF 2012. I'm thinking that within the next three months we'll have new information on this subject. You may have heard of the Coalition for Enterprise Software, being formed in the summer of 2011. I have not been able to speak with any of the individual entities involved, but the overall goal is to provide new products and services to run existing software in place of the Microsoft Office suite. The strategy sounds good to me. I want to wish all my loyal readers and clients a happy, healthy, and prosperous New Year. I'll continue to be out and about during the upcoming year.
