Download Namirial Termo 2.2i.Effect of cardiac resynchronization therapy on left ventricular
deformation properties in patients with heart failure. Left ventricular (LV) dysfunction is
associated with a variety of reduced LV performance and remodeling. Cardiac resynchronization
therapy (CRT) is an effective treatment of LV dysfunction, but the underlying mechanistic effect
on LV performance and remodeling in patients with heart failure is incompletely understood.
Forty-six patients with LV dysfunction, QRS > or = 120 ms, and New York Heart Association
functional class II to III symptoms underwent LV strain analyses with myocardial tagging and
were compared with a subset of 18 control subjects without LV dysfunction. Sixteen of 46
patients were responders to CRT, defined as LV end-systolic volume reduction > or = 15% and
reduction in New York Heart Association functional class. LV longitudinal and circumferential
strain were significantly reduced in the patients compared with the control subjects (radial
strain: -17.8% +/- 3.3% versus -21.7% +/- 2.8%, P
