The Kingdoms of Elyria is a new game being developed by The Foundry and Cryptic Studios. Using the creative collaboration of the worlds of tabletop roleplaying, computer game development, and online gaming, The Kingdoms of Elyria allows players to create a character and play an entirely new kind of RPG experience. RPG Story: As the title suggests, it is a RPG. The game has a deep, varied story with a multitude of characters, and a prologue where the story starts. While the game can be played without the prologue, even before you start playing the story is detailed to such a degree that it is difficult to play it otherwise. Production: It has a two-year development cycle. Two years ago, they are developing the game, and this year, it will finally be released. System: The system is based on the experience system. The game's unique style is that it is interactive through energy. To be more detailed, there are stages which the player can increase the amount of energy in the game through interaction, and increase the number of energy the player has at the time. The game has a large plot, and the more energy you spend, the more you will progress. Development Team: At the head of development is the studio, 'Devine Digital Studio.' For the people involved in this project, this is a work that they have wanted to do for a long time. What's new in Elden Ring:

Example After A Month of Playtime As I became engrossed in the fantasy world of 〈Fallen Dragon〉, I finally entered a deep meaningful scene. I thought, to be ruled by the hand of fate, I have already arrived at the beginning of a significant event and felt at peace. I felt the burden of responsibility fall away. It didn't end there, of course. I succeeded in accumulating an enormous amount of experience and items, and by any means, I gained the ability to be an immense Tarnished, the strength to fight back against the enemies of Lord Altea, and through the pleasure of terrifying death, power, and a sense of accomplishment. This has been the most intense play so far. I hope to get more fun, more power, and more positive experience like this in the future. —Yukei1. Field of the Invention The present invention generally relates to a semiconductor memory device, and more particularly to a mask ROM memory cell and its producing method. 2. Description of the Related Art It is necessary to reduce a chip size of a cell array area of a mask ROM memory cell in order to downsize the memory. To reduce the chip size, a size of forming a mask ROM memory cell is reduced, but the size of a transistor is also reduced so that a current capacity is reduced. Thus, it becomes hard to implement the mask ROM memory cell of high integration density. For example, if a source region of a mask ROM memory cell is formed to become a signal electrode of capacitance element, a gate formation region of the memory cell passes over the source region, and thereby the coupling capacitor of the memory cell may be undesirably formed. Therefore, a mask ROM memory cell is disclosed in Japanese Patent Laid-Open Publication No. 10-203577, in which the source region and a peripheral portion of the gate formation region of the memory cell are formed to be not overlapped with each other. This mask ROM memory cell has, in one memory cell, a first transistor and a second transistor, and the first transistor is operated by a first voltage supplied via a bit line, and the second transistor is operated by a second voltage supplied from a different source line, for storing binary information of the data. That is, the first transistor is turned on only during one half of operation time, or at one data inversion time, and
